BAMBERGER'S STRIKE BIGGER EVERY HOUR

Forty Feet of \$40 Gold Rock Now Exposed in the Lower Level.

At the properties of the Bamberger company, De Lamar, Nev., conditions are indergoing a transformation that promises a story as electrifying as that which deals with the origin of many of the De La Mar millions, said Loule Wertheimer, the merchant-miner, on his arrival from that camp of gold yesterday morning, indeed, it is difficult to conceive that the old benanza, at any period in its career, has been productive of ores more productive than are those occurring in the channel uncovered in what is commonly known as Hoppen ground, and which has just been tapped on the 1200-foot level. It is upon this channel, said Mr. Wertheimer, that the management has decided to draw more freely, now that the stopes have been opened, and, of course, everybody is relying on it for a bigger harvest of gold buillion than at any period under the present regime, if it does not compare with the paimiest period under the former dynasty. It is said of the channel on the 1100-foot level that already it has been chosscut for forty feet, with but one wall exposed, and that in it are occurring some of the most sensational values. These disappear in the mass, however, and of the latter it is said the average will maintain a position around \$40 gold per ton, if those figures are not exceeded. At a depth of 1200 feet connection has just been made with the channel and while it is too early to discuss its characteristics on this level, everything thus far is indicative of strength. By not a few of those who have grown up with the camp the new channel is being exploited, said Mr. Wertheimer, as the master channel in a system that has been so productive of gold, and new lessons are eagerly looked for. That it may be relied on for great depth is positively assured.

Mr. Wertheimer is visiting his parents during his sojourn in the city and incidentally looking out for additional novelities for his customers in the camp of gold. He will leave for the southwest again in a few days. ses a story as electrifying as that which deals with the origin of many of the De

THE DAY ON 'CHANGE.

Market Generally Unchanged, With Orders Easily Executed.

Orders Easily Executed.

The day on the mining exchange closed on the sale of 21.4% shares of stock, for 2319.27, and with the condition generally apathetic. Bulletins from Boston, telling of sales of Daly West up to \$16.25 emboldened the local plunger, and for fifteen shares he was induced to pay \$15, while Columbus Con., less buoyant than on the previous day, was dealt in at \$1.80, notwithstanding the addition of over \$19,000 to the contents of its sack. Now York moved up creeply to 40% cents with Yankee Con. coming out to a bid of 33 cents while Silver Shield, under the weight of a 3-cent assessment, was reduced to 18 cents, with Lower Mammoth around 25% cents and May Day doing business around 9% cents, the day closing on the following market:

Sharp Advance in Silver. NEW YORK Aug. 18.—The sharp advance in silver today in the New York market of 5c, from 605c to fic, is attributed to heavy buying by both Russia and China.

For critical smokers Flor De Baltimore.

GOLD MOUNTAIN MINES ARE UNITED

Holland and Deerpark Pool Their Interests in One Big Estate.

TO CONTINUE LONG TUNNEL TO SEVIER CON. LEDGE

Now Three Thousand Feet Into the Gold-Bearing Zone, on Gold Mountain.

The gold-bearing interests of the Holland and Deerpark companies on Gold mountain, in the southern country, have been finally amalgamated and, with an estate embracing over 200 acres, developments and further researches will be prosecuted under a most energetic policy prosecuted under a most energetic policy. Negotiations that have long pointed to this consummation were closed by Williard F Snyder, representing the Holland, and Walter James, representing the Deerpark, yesterday, and last night the latter departed for camp, where a force will be organized and active operations resumed. In the amalgamation the name of the Holland will be retained and a formal conveyance made to it of the Deerpark's group. The location of the property is a tipon what is characterized at Gold mountain as Sevier system of ledges, and into this the owners of the Holland have already driven a distance of 2009 feet. In driving this tunnel the management has encountered some of the richest gold ore with which the camp has been endowed. It was from it, indeed, that Willard Snyder hammered the first bar of gold buillion that came from the region—this an event which goes away back into patriarchal days. While many, including the Annie Laurie company, have made the company inducements that to others appeared most seductive, they have uniformly declined to part with it, and with the annexation of the Deerpark group the tunnel will be at once advanced, the properties to be equipped for the reduction of their ores as soon as conditions shall justify it. According to measurements submitted by the engineer, connection with the ledge in Deerpark territory should be made at a point about 200 feet distant from the present station in the tunnel, after which the campaign will be confined to the blocking out of wealth in the Sevier Con-ledge on its north extension. Negotiations that have long pointed

RAILROAD VS. MINER.

Fight Over the Discoveries in Nevada Is Shaping Up.

Is Shaping Up.

The mine-owners of Olinghouse, out of Reno, New, are organizing for the desperate struggle with the Southern Pacific, which is asserting ownership to the territory and all discoveries within it, on the ground that this ownership was acquired in the grants by Congress. A few nights ago the miners of that camp, with reinforcements from White Horse, met en masse and determined to fight. The Reno Journal quotes Judge Cheney as follows:

"I believe that if it is established that prior to the issuance of the patent to the relifond that that ground was known to be mineral ground the patent will be annufed. The question has been ruled on several times. A similar case went to the Supreme court of the United States from Montana, and the court held that when grants were made to the railroad it was the intent of Congress, in order that the terources of the country might be properly developed. That the minerals that were in the granted area should be left open for the explorer and prospector. In the final opinion on the case in question of fact, as to whether or not at the time of the issuance of the patent the ground was known to be mineral, was the determining feature."

Utah's Rich Ores.

Utah's Rich Ores.

The management of the Utah mine. Deep Creek, marketed another lot of twenty-eight tons of ore from that property during the day, for which it received 3361. A previous consignment since the first of the menth afforded as much as £500, and with these coming at short intervals no trouble should be experienced in maintaining the present dividend of \$1000 monthly.

MAJESTIC'S DISCOVERY

New Ore Body Opening Up as Management's Researches Progress.

MILFORD, Aug. 18.-The recent strike in the Harrington-Hickory group, owned by the Majestic Copper company, has by the Majestic Copper company, has excited much interest here. The vein, more than ten feet wide, was encountered in a winze being sunk a short distance to the east of the 400 level of the Gorman shaft. To be exact, a drift was cut about twenty feet, almost horizontally, at which point the ore was encountered. Upon this vein work has been progressing through an incline. The foot wall, which is lower has been exposed; the hanging wall has not yet been encountered. The shaft is all in a body of lead carbonate and silverchloride, the richest yet found in the property. The ore being encountered in large volume at this depth, 425 feet below the surface, tends to emphasize the theory of the best informed experts that the mines of this district justify deep sinking. The trend of this great ore body, so far unspovered, is toward the porphyry dyke that cuts the basin clear across the orbeit for several miles at an unknown depth. From present appearances the Harrington-Hickory may safely be placed upon the list of producers.

It was our good fortune this week to visit the burning Moscow mine, upon which Matthew Cullen, the owner, is now expending his energies in developing, under the direct management of William Ferguson and a corps of competent miners. This property, we found, is peculiar in this: That in many portions of it rich zinc ore in carloads can easily be taken out, while in the lower levels, and especially on the 230, the ore is a rich lead carbonate, rich in silver and carrying some gold. In places rich copper is also found, and not less than 5 per cent copper permeates all the ore bodies. The development of this property is tow being conducted on practical, scientific lines and the result is another great producer in Star district.

About 1500 feet south of the Moscow mine may be found the Mountain Stump one of the most altitudinous mining claims in the Star district. Upon this claim is one of the finest defined ledges to be found in the district. It is a true fissure, and may be traced on the surface for 1 excited much interest here. The vein, more than ten feet wide, was encountered

can be made easily to pay for development.

On the south end, adjoining the Moscow mine, Mr. Kirk owns a couple of mines rich in the metals of the district to wit. Silver, lead, copper and some gold.

The formation of this entire portion of Star district is lime and porphyry. There is not, perhaps, any portion in this ore-bearing country a richer ore zone than can be found within a mile and a half to three miles in the vicinity of which we speak. I believe the whole might be purchased, from the several owners for less than \$1.00,000, and if some conscientious promoter would induce a syndicate to purchase the whole territory, it would make more than \$20,000,000 in less than ten years. It is certainly a proposition worthy of consideration.

In the Old Hickory, work is being directed by the superintendent. Mr. Ingols, looking to the extrastion of several thousands of tons of shipping ore, stoped out and exposed in the upper levels. A drift is being run on the 200 level to tap the great body of black iron, within about 149 feet.

In the meantime the shaft is heing viewer.

In the meantime the shaft is being vigorously pushed down on a contact between the grante and time. In sinking much good ore is being encountered. This great property never gave promise of such great wealth as at present, the result of a few months of development accurately directed.

Mining Notes.

The mill at Manning is again in active commission on old Mercur tallings. Manager Hanchett of the Newhome in-terests has gone into the diggings again Julien Siegel of Rhyolite, Nev., has re-turned from camp to visit with the folks. Advices from Mercur indicate that op-erations at the Herschel have been again sourceded.

M. J. O'Meara has returned from Ne-Col. Nick Treweek, manager of the Wabash, has returned to its prespective benanzas at Park City.

The management of the Mammoth of Tintle continues to report at the smelter with a heavy tonnage of ore.

Another consignment of crude ore and concentrates is being loaded by the management of the Uncle Sam of Tintic. R. W. Foster manager of the Sevier Con mines, Gold mountain, is up from camp, much pleased with the behavior of the properties.

N. A. Page, at one period among the most active members of the mining exchange, was among the day's visitors from Park Cil-

Henry M. Crowther, manager of the Continental-Alta, is back from camp with samples of walfenite, of which the prop-erties are productive.

Hartwig A. Cohen, owner of valuable interests in the Utah Copper company, has arrived from California again to inquire into conditions at the bonanza.

Harry McGown, writing from Las Vegns, says that for the properties of the Bullfrog No. 4 company, Nevada, he has just rejected a most substantial bid. Many friends hope to see Mr. McGown return with a fortune. return with a fortune.

Lessees on the property of the Chloride Point Mining company, Lion hill, reported on the market, through Manager Cope-land of the Taylor & Brunton sampler, during the day with seven tons of ore, which marketed on controls showing as much as 65 ounces silver and \$1.50 gold per ton.
